

ACADEMIC PROGRAM

MACHINE LEARNING I

B.F.A. IN COMPUTER SCIENCE

MODALITY: ON CAMPUS

ACADEMIC YEAR: 2023-2024

Name of the course:	Machine Learning I
Degree :	Computer Science
Location:	Centro Universitario de Tecnología y Arte Digital
Area:	Data Engineering
Year:	4º
Teaching period:	1
Type:	OBM
ECTS credits:	6
Teaching modality:	On campus
Language:	English
Lecturer / Email	-
Web page:	http://www.u-tad.com/

SUBJECT DESCRIPTION

Area description

The contents of the subject allow students to understand the flow of searching, ingesting, storing, processing and analyzing data information and brings students closer to the techniques and technologies necessary for managing large amounts of data.

Subject description

This subject teaches algorithms for the automatic creation of intelligent systems based on data sets from specific application domains, in order to extract and model the knowledge contained in them for subsequent application in intelligent decision support systems.

The models addressed are the classic supervised learning and unsupervised learning algorithms, focusing on their mathematical development and their use with the R (and Python) programming language.

COMPETENCIES AND LEARNING OUTCOMES

Competencies

BASIC AND GENERAL SKILLS

CG1 - Ability to understand, schedule and solve problems through software development

CG3 - Knowledge of the scientific fundamentals applicable to the resolution of computer problems

CG4 - Ability to simplify and optimize computer systems by understanding their complexity

CG9 - Ability to learn, modify and develop new software solutions

CG10 -Use of creative techniques to carry out computer projects

CG11 - Ability to search, analyze and manage information for insights capture

BC1: Students should demonstrate knowledge in an area of study that builds upon the foundation of general secondary education and goes beyond at a level that, while supported by advanced textbooks, also encompasses certain aspects derived from the cutting edge of their field of study.

BC2: Students should be able to apply their knowledge to their work or vocation in a professional manner, and they should possess the competencies typically demonstrated through the development and defence of arguments as well as problem-solving within their field of study.

BC3: Students must possess the ability to gather and interpret relevant data (usually within their field of study) in order to make judgments that involve reflection on socially, scientifically, or ethically significant issues.

BC4: Students should be capable of conveying information, ideas, problems, and solutions to both specialized and non-specialized audiences.

BC5: Students should have developed the learning skills necessary to pursue further studies with a high degree of autonomy.

TRANSVERSAL SKILLS

CT1 - Knowledge of the definition, scope and implementation of the fundamentals of project management methodologies for technology projects

CT2 - Knowledge of the main sectorial players and the life cycle of a digital content development and commercialization project

CT4 -Ability to update the knowledge acquired in the management of digital tools and technologies according to the current state of affairs of the sector and the technological solution

CT5 -Development of the basic skills for digital entrepreneurship.

SPECIFIC SKILLS

CE3 - Knowledge of relational algebra and querying in procedural languages for the design of standardized database schemas based on entity-relationship models

CE10 - Ability to work with a release manager and generate application documentation automatically.

Learning outcomes

Upon completion of the degree, the graduate will be able to:

- To know and develop storage procedures and data management in distributed environments.
- To know and apply supervised, unsupervised and semisupervised learning techniques.
- To know and apply Deep Learning techniques

- To be able to retrieve information using web scraping or standard APIs
- To know and understand Natural Language Processing techniques
- To be able to analyze social networks contents.
- To understand the nature and representation of digital images.
- To know the applications of neural networks to the analysis and generation of sound, static images and video.
- To develop software solutions for computer vision.
- To develop a fully-fledged data project applying iterative methodology from design to delivery.

CONTENTS

Supervised Learning

Non-supervised Learning

Reinforcement learning

SUBJECT SYLLABUS

Topic 0. Introduction to Machine Learning

0.1. What is

0.2. Learning type

0.3. Model creation

0.4. Performance

Topic 1. Data Analysis with R (and Python)

1.1. Introduction to the R language: environment, programming, basic functions

1.2. Python: environment and basic libraries (numpy, pandas, matplotlib)

1.3. Descriptive statistics

1.4. Multivariate analysis

1.5. Linear algebra for ML

Topic 2. Prediction models (supervised learning)

1.1. Regression:

1.1.1. linear

1.1.2. multiple

1.2. Classification

1.2.1. Logistics

1.2.2. Real project with exploratory analysis and data processing

1.2.3. SVM

1.2.4. Decision trees

1.2.5. K-nn

Topic 3. Description models (unsupervised learning)

3.1. Clustering

3.1.1. Hierarchical

3.1.2. K-means

3.2. PCA

3.3. Associations

TRAINING ACTIVITIES AND TEACHING METHODOLOGIES

TRAINING ACTIVITIES

LEARNING ACTIVITIES	Total hours	Hours of presence
<i>Theoretical / Expository classes</i>	29,38	29,38
<i>Practical classes</i>	23,25	23,25
<i>Tutorials</i>	4,00	2,00
<i>Independent study and autonomous work of the student</i>	50,00	0,00
<i>Elaboration of work (group or individual)</i>	31,88	0,00
<i>Evaluation Activities</i>	5,25	5,25
<i>Project Follow-Up</i>	6,25	6,25
TOTAL	150	66,13

Teaching methodologies

Expository method or master lesson

Case learning

Learning based on problem solving

Project based learning

Cooperative or collaborative learning
inquiry learning
Flipped classroom methodology
Gamification
Just in time Teaching (JITT) or classroom on time
Expository method or master lesson
Case method
Learning based on problem solving
Project based learning
Cooperative or collaborative learning
inquiry learning
Flipped classroom methodology
Gamification

TEMPORAL DEVELOPMENT

DIDACTIC UNITS / TOPICS TIME PERIOD

Topics 0 and 1. Introduction and data analysis Week 1, 2 and 3
Topic 2. Prediction models Weeks 4, 5, 6, 7, 8 and 9
Topic 3. Description models Weeks 10, 11 and 12
Exercises Week 13 until the end of the course

EVALUATION SYSTEM

ASSESSMENT SYSTEM	MINIMUM SCORE RESPECT TO THE FINAL ASSESSMENT (%)	MAXIMUM SCORE RESPECT TO THE FINAL ASSESSMENT (%)
<i>Assessment of participation in class, exercises or projects of the course</i>	10	30
<i>Assessment of assignments, projects, reports, memos</i>	40	80
<i>Objective test</i>	10	60

GRADING CRITERIA

ASSESSMENT SYSTEM	ORDINARY EVALUATION	EXTRAORDINARY EVALUATION
<i>Assessment of participation in class, exercises or projects of the course</i>	10	10
<i>Assessment of assignments, projects, reports, memos</i>	40	40
<i>Objective test</i>	50	50

General comments on the evaluations/assessments

- To pass the subject in the ordinary call, both the completion of the exercises and the final project are optional, with only the exam being mandatory. A final grade of 5.0 (out of 10) is required, that is, if you do not complete the exercises or the project, the grade on the exam should be at least 10.0.
- If you do not pass the exam in the ordinary call, in the extraordinary call the exam will count 100% of the grade and it is necessary to obtain at least a grade of 5.0 (out of 10) to pass.

REQUIRED MATERIALS, SOFTWARE AND TOOLS

Type of classroom

Theory classroom

Board and projection system

Materials:

Laptop with at least 4GB of RAM

Software:

RStudio y Anaconda (con Jupyter Notebook)
